

Math Munch Exploration!

Search for Math Munch and open it up. This is the math blog that I coauthor with Justin Lanier and Anna Weltman. It is, no joke, written for you! We write this blog to help you understand that math is something that extends beyond our classroom walls. It's something you can choose to do, and it's something you can do at home. Math is something that exists all over the internet, so each week we try to share at least 3 great math things from the internet to inspire you and help you do/learn math on your own. We begin today.

Your mission and goals:

- ➊ Read an entire Math Munch post.
- ➋ Work on or solve a problem you find in Math Munch.
- ➌ Read an interview from the Q&A section.
- ➍ Go to the Videos section and watch a video that you find interesting. Write a review. Maybe leave a comment, if you can.
- ➎ Search for a kind of math that you think you've heard of.
- ➏ Leave a comment on a post. Say specific things.
- ➐ Write a review of 1 math game, explaining how it is mathematical and what you learn by playing it.

After all of this fantastic exploration, your job is to reflect deeply. You will have seen MANY many things, so you should have lots to write about. In your reflection journal, try to go over everything you did, saw, and thought in your mind. Really reconstruct the experience for me.

ALSO in your reflection journal, set two goals for the rest of the year. What do you want to learn? How do you want to grow, develop, and improve as a mathematician and math student?

• Make sense?
